PAPERplus® Chevron<sup>3</sup>

NEW FROM  
STOROPACK!

  
**STOROPACK**

# Void fill material for high-throughput applications

The PAPERplus®  
Chevron<sup>3</sup> is an evolution of the PAPERplus® Chevron<sup>2</sup>. The system combines a higher working speed with the production of a pleated paper tube, which offers improved padding capability.

Quicker and more efficient packing and reduced materials requirements:

- Speed: up to 32m/min
- Patented folded paper tube offers better padding and maximum volume filling with a minimum of packaging material

PAPERplus® Chevron<sup>3</sup> offers numerous opportunities for integration at the packing station and in the overall packing process.

At a standard packing station system, the paper padding is located in a plastic tube at an ergonomic working height, ready to grab. The strip of padding is automatically divided into sections.

Under the “Working Comfort” approach to advising its customers, Storopack sets up their PAPERplus® Chevron<sup>3</sup> protective packaging systems for maximum effectiveness, efficiency and ergonomics by applying an “into-the-box” protective packaging solution.

To further reinforce the positive experience when unpacking, PAPERplus® Chevron<sup>3</sup> is also available with white kraft paper.
