

## **Air cushions in a few easy steps**

Product launch AIRmove<sup>2</sup>

### **Storopack launches the AIRmove<sup>2</sup> air cushion system on the market**

**Metzingen, December 2016.** Storopack, the protective packaging specialist, is launching its new air cushion system AIRmove<sup>2</sup> on the market in December. The machine manufactures air cushions, which provide products with optimal protection in shipping cartons, at the touch of a button. The air cushions are made directly at the packaging site while AIRmove<sup>2</sup> also stands out on account of its compact size. Users therefore save on storage costs for traditional protective packaging material. With production output of around 10 metres of film per minute, the packaging material is quickly made available while AIRmove<sup>2</sup> also impresses with a low-noise film guidance system. AIRmove<sup>2</sup> is the ideal solution in workplaces with packaging requirements of 200 to 500 packages a day.

### **Efficient and cost-effective**

The diverse range of air cushions are ideally suited for wrapping, cushioning, securing and filling empty spaces in shipping cartons. "AIRmove<sup>2</sup> provides our customers who have medium-level packaging requirements with an optimal and cost-effective protective packaging solution. The packaging material can be produced in a few simple steps and used for a wide range of applications," remarked Michael Spicker, AIR product manager at Storopack.

AIRmove<sup>2</sup> can be easily integrated into existing packaging processes and used either as a tabletop unit or wall-mounted. AIRmove<sup>2</sup> can be deployed immediately thanks to its quick start function. It is operated via a clear text display which allows the film type and filling volume of the air cushions to be easily configured. Alternatively, the AIRmove<sup>2</sup> film output can be controlled via a foot pedal or a push button if required. AIRmove<sup>2</sup> is equipped with an exchangeable cutting system and the film comes from the roll. Storopack supplies the three film types VOID, BUBBLE and CUSHION for the machine, enabling the air cushions to be manufactured in various forms. They are available in different sizes: VOID for large air cushions (200 x 120 millimetre), CUSHION for padding with smaller air cushions (400 x 250 millimetre) and BUBBLE for padding with standard-size air cushions (400 x 160 millimetre). All film rolls are 350 metres long and easy to change.

The AIRmove<sup>2</sup> air cushion system from Storopack will be launched on the market in December 2016 and is designed for workplaces with requirements of 200 to 500 packages a day. **Image: Storopack**

#### **About Storopack**

Storopack was founded as a family business in 1874 and has operated as Storopack Hans Reichenecker GmbH based in Metzingen, Germany, since 1959. As a specialist for protective packaging, the globally active company group Storopack is organised in the two business areas of Molding and Packaging. The Molding division, with certified production locations in Europe and China, supplies made-to-measure protective packaging and technical form parts in expanded foams for various areas of industry. The Packaging division supplies flexibly applicable protective packaging with air cushions, paper pads, PU foam packaging systems and pourable padding materials and is represented by its own production locations and branch offices in Europe, North America and Asia. 2,450 members of staff work for Storopack worldwide. In the year 2015, Storopack generated consolidated sales of 416 million Euros. The products are available in more than 40 countries.
